

Machine Identity Protection Through ServiceNow

Challenges

- Users having to learn another software interface
- Duplication of Service Management Processes with potential deviations from currently approved and implemented processes
- Duplication of book of record for some IT configuration items

Difenda machine identity protection ServiceNow app as a solution

- Machine Identity Lifecycle Management service requests (Issuance, Renewal, revocation) now integrated into the organizational Service Catalog accessible to all users
- Leverage existing Organizational Change Management Processes that are defined within ServiceNow
- Leverage organizational CMDBs for Systems, servers and applications
- Orchestrate certificate installation through integration with the Venafi Platform

Benefits

Improve compliance and adherence to policies and standards by simplifying User request process

Accurate inventory of all Machine Identity installed locations and association with CI in the CMDB

Be able to replace all machine identities in a business as usual manner without additional manpower and emergency change management

Leverage ServiceNow workflows for certificate request and approval to adhere to organizational policies and processes

Avoid outages resulting from:

1. Unknown and unmanaged key stores / installed locations
2. Untimely certificate renewals

Datasheet
