Get Azure Sentinel production-ready with one of Microsoft's top global implementation partners

About Difenda's Azure Sentinel Implementation

Difenda is a world-class, certified, and accredited cybersecurity company and Microsoft's top global implementation partner for Azure Sentinel. Rapidly deploy and get Azure Sentinel production-ready with enhanced configuration, custom development, integrations, ongoing support, and project management.

What We Offer

Go from concept to production-ready with our Rapid Cover™ deployment methodology. Difenda takes a collaborative approach through the initial design and planning sessions. Next, we leverage automation and orchestration tools so your organization can unlock Azure Sentinel's full potential.

Azure Sentinel offers the best in Security Information and Event Management (SIEM) and Security Orchestration, Automation, and Response (SOAR). Difenda's development services use purpose-built customizations to keep the focus on your business processes and the outcomes you want.

Implementing an advanced platform like Azure Sentinel is a complex task. Every project is assigned a PMI®-certified project management professionals to keep your project on task, on time, and on budget—with full visibility into deployment, configuration, and complete tracking of project risks.

Getting truly enterprise-wide visibility means getting data from other hardware and software sources. Difenda can integrate Microsoft log sources and any non-Microsoft log sources using out-of-the-box integrations and our custom development services.

What Our Customers Are Saying

"The team at Difenda was able to design and implement our Azure Sentinel with precision in the short time frame we needed. Throughout the project, they helped educate our team members on the platform along with answered all of our questions."
